

Wellness/Screening for Dexa Scan

The Osteoporosis Scan you are scheduled for may be a covered benefit under a wellness benefit with your insurance company. If you are not sure if this type of coverage applies to you, please call your insurance company prior to your appointment. The Dexa Scan procedure code is 77080 – you'll give this code to your insurance for them to check to see if this is a covered wellness benefit under your plan. Once you've checked coverage with your insurance plan please check the appropriate box below on how we'll be billing for this service.

Any changes to the status of your request must be made prior to claim submission. A change in diagnosis to increase reimbursement will not constitute a valid reason for claim re-submission.

Please note: If you have already been diagnosed with Osteoporosis or if the provider does not feel a screening diagnosis code is the most accurate code for your visits, your request will be denied.

For more information in regards to this, please feel free to contact our billing department at: 235-7215.

- Yes, if appropriate, submit as wellness/screening
- No, do not submit as wellness
